BIOL Chem. 272:33045-33055(1997).

FUNCTION: RAPIDLY HYDROLYZES CHOLLINE RELEASED INTO THE SYNAPSE. CATALYTIC ACTIVITY: Acetylcholline + H(2)0 - cholline + acetate. SUBUNIT: DIMERS AND COLLAGEN-TAILED FORMS, IN WHICH CATALYTIC TETRAMERS ARE ASSOCIATED WITH ANCHORING PROTEINS THAT ATTACH THEM TO THE BASAL LAMINA OR TO CELL MEMBRANES, IN THE COLLAGEN-TAILED FORMS, SUBUNITS ARE ASSOCIATED WITH A SPECIFIC COLLAGEN, COLO, WHICH TRIGGERS THE FORMATION OF ISOFORM T TETRAMERS FROM DIMERS. MISCELLAMEOUS: NO OTHER ISOFORM SESTET. THIS PROTEIN CORRESPONDS TO THE TISOFORM IN OTHER SPECIES.

MISCELLAMEOUS: NO OTHER SPECIES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 European Bioinformatics Institute.

OF KNOWN ACHE FORMS:

ALTERNATIVE PRODUCTS: 3 isoforms; T (shown here), H produced by alternative splicing. It is not known wl R is functional.

R is functional.

R IS functional.

R IS FUNCTIONAL NERVOUND IN CENTRAL NERVOUND SUPERINGER BUT NOT TIVED.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    322
                                                                                                              -!- FUNCTION: RAPIDLY HYDROLYZES CHOLINE RELEASED INTO THE SYNAPSE.
-!- FUNCTION: RAPIDLY HYDROLYZES CHOLINE + H(2)O = choline + acetate.
-!- CATALYTIC ACTIVITY: Acetylcholine + H(2)O = choline + acetate.
-!- SUBUNIT: ISOFORM H GENERATES GPI-ANCHORED DIMERS; DISULFIDE
-!- SUBUNIT: ISOFORM T GENERATES MULTIPLE STRUCTURES, RANGING FROM
MONOMERS AND DIMERS TO COLLAGEN-TAILED AND HYDROPHOBIC-TAILED
MONOMERS AND DIMERS TO COLLAGEN-TAILED AND HYDROPHOBIC-TAILED
FORMS, IN WHICH CATALYTIC TETRAMERS ARE ASSOCIATED WITH ANCHORING
FROTEINS THAT ATTACH THEM TO THE BASAL LAMINA OR TO CELL
PROTEINS THAT ATTACH THEM TO THE BASAL LAMINA OR TO CELL
MEMBRANES. IN THE COLLAGEN TAILED FORMS, ISOFORM T SUBUNITS ARE
ASSOCIATED WITH A SPECIFIC COLLAGEN, COLO, WHICH TRIGGERS THE
